

## Cingular Wireless Exhibit CTIA IT & Entertainment 2006

Cingular featured a Junxion station within their booth at the CTIA IT & Entertainment trade show hosted by the leading wireless industry organization in September, 2006.

Junxion's remote surveillance camera connectivity demonstration was designed to build awareness for the broad range of telemetry/M2M applications supported by the Junxion Box with Cingular's Broadband Connect data service in addition to such diverse solutions as landline replacement, data service back-up, vehicle connectivity, and portable networks.

Cingular was the only carrier exhibiting at the show, resulting in steady booth traffic.
