

# Junxion AB-10 bracket drill hole pattern

All measurements are in inches. Check the drill pattern with a ruler to ensure your printer did not scale the image.

The AP-10 bracket is designed to be secured with four screws that have a 10-32 undercut at 82 degrees. Screws are not included in the AB-10 package. Junxion recommends using screws with threads that are appropriate for the material to which the Junxion Box will be mounted. More information is available at [www.junxion.com/bracket](http://www.junxion.com/bracket).
