

## JUNXION RELEASES CARRIER-DRIVEN FIRMWARE UPGRADE

### – Hosted Remote Management Now an Integrated Feature –

**Seattle, WA (October 30, 2006)** – Junxion, Inc. today announced the release of Junxion firmware v1.5, a free upgrade that integrates hosted Field Commander™ remote management for Junxion Box™ cellular routers and includes drivers for the latest high-speed PC Card modems to be offered by Cingular Wireless and Sprint Nextel.

Field Commander was developed in collaboration with Cingular and Sprint personnel as well as customers that were well-versed in the pro's and con's of remote management tools for embedded cellular modem solutions and conventional routers. Junxion's remote management is now an integrated feature available at no additional charge for all existing and new Junxion Boxes. Hosting of the commercial-grade application makes it uniquely quick and easy for IT managers to set up and use for monitoring, configuring and updating firmware on single units or thousands.

“After launching our hosted remote management with enterprise and government customers it was immediately evident that Field Commander adds tremendous value to virtually any Junxion Box deployment,” said Peter Polson, Junxion co-founder and vice president of product. “So we opted to bundle hosted Field Commander with every Junxion Box, betting that the benefit to our customers and partners creates a competitive advantage for Junxion.”

Junxion's latest firmware upgrade also enables Junxion Box users to take advantage of the latest PC Card modems from Cingular and Sprint:

Cingular (EDGE/HSDPA) - Sierra Wireless AC 875

Sprint (1xRTT/EV-DO Rev. A) - Novatel Wireless S 720, Sierra Wireless AC 595

Additionally, Junxion firmware v1.5 enhances the functionality of existing features including onboard VPN, DHCP management and configuration of a customizable splash screen.

Version 1.5 is the most recent of several commercial-grade firmware releases Junxion has co-developed with wireless carrier input since their September, 2004 shipment of the first field-upgradeable cellular routers with nationwide U.S. distribution.

### **About Junxion**

Junxion, Inc. is the early market leader in field-upgradeable cellular routers for commercial-grade solutions, supporting more than 700 enterprise and customer organizations. The company's Junxion Box™ appliance, with patent-pending firmware, makes it easy for any computing device with either Ethernet or Wi-Fi LAN interfaces to connect with the latest cellular data services from the leading U.S. wireless carriers. Cingular Wireless and Sprint have certified Junxion products and are promoting them with service plans for a wide array of enterprise and government applications. Technical and business innovations like Field Commander™ (hosted or licensed remote management) and Junxion Complete™ (turnkey solution architecture, integration and installation services) make Junxion uniquely capable of simplifying large and/or sophisticated cellular data solution deployments. Junxion, Inc. is headquartered in Seattle, Washington. Investors include Trilogy Equity Partners, a private equity firm established by founding executives of McCaw Cellular Communications, Western Wireless and Voicestream.
